

THIS IS A TEST

Reflect on these questions by yourself or with your group.

Q: Is there anyone you know whom you fear may be infected by a sexually transmitted disease? If so, why do you think that may be true?

- How did you come to possess that knowledge?
- Knowing what you know, what are your options?
- Do you believe it's possible that person might go for a blood test if you offered to go along? Why?

Q: If you've been sexually active, how do you know you're not infected?

- Have you been tested since your last sexual contact?
- What do you think you have to gain or lose by getting a blood test?
- What do you think you have to gain or lose by not getting a blood test?

Q: What do you think is your responsibility to yourself and others when it comes to infectious diseases? Why? This is a test
